High-Level Test Case: Functional Testing of Mobile Application "Crazy Cats"

Objective: Verify the core functional capabilities of the mobile application "Crazy Cats" to ensure correct operation and user convenience.

Preconditions:

- The "Crazy Cats" application is installed on the mobile device.
- The user has an active internet connection.
- The user has provided necessary permissions for location access (if required).

Steps:

1. **App Launch and Login**:
   - Open the "Crazy Cats" mobile application.
   - Register or log into the account.
2. **Uploading Cat Photos**:
   - Upload a new photo of a cat.
   - Verify that only cat photos can be uploaded.
3. **Viewing Photos of Other Users**:
   - Browse photos of cats uploaded by other users.
   - Like or leave comments on photos uploaded by other users.
4. **Creating and Participating in Communities**:
   - Create a new community (group) for sharing cat photos.
   - Join an existing community and interact by commenting or liking photos.
5. **Adding Friends**:
   - Add a new friend to the contact list.
   - Verify the ability to view friends' activities and interact with their cat photos.
6. **Application Settings**:
   - Review and modify application settings such as language and notifications.
7. **Widget Functionality Check**:
   - Add the application widget to the device's home screen (if available).
   - Ensure the widget displays correctly and updates as expected.

Postconditions:

- Exit the "Crazy Cats" application.
- Verify that all tested functionalities work correctly and the application does not contain critical errors.

Priority: High

Severity: Medium

Status: Open
